

Indicative light spill

SPORTS LIGHTING UPGRADE

# LAGOON RESERVE

PORT MELBOURNE

## Sylvania Briteline Raptor (Proposed LED Luminaire)

High performance LED luminaires will be utilised to achieve the required 100 lux horizontal average illuminance (lux) levels on the new soccer field, to meet the Australian Standard for Sports Lighting (AS 2560).

Precise light beam control limits rear light spill to adjacent residential properties.

The asymmetric (forward throw) optics from the luminaires achieves the high lighting levels and uniformity on the field with minimal 'up-tilt' of luminaires (0° to 5°), reducing lighting intensity directed from luminaires towards residential properties.
