

Factsheet - Draft Neighbourhood Character Statements

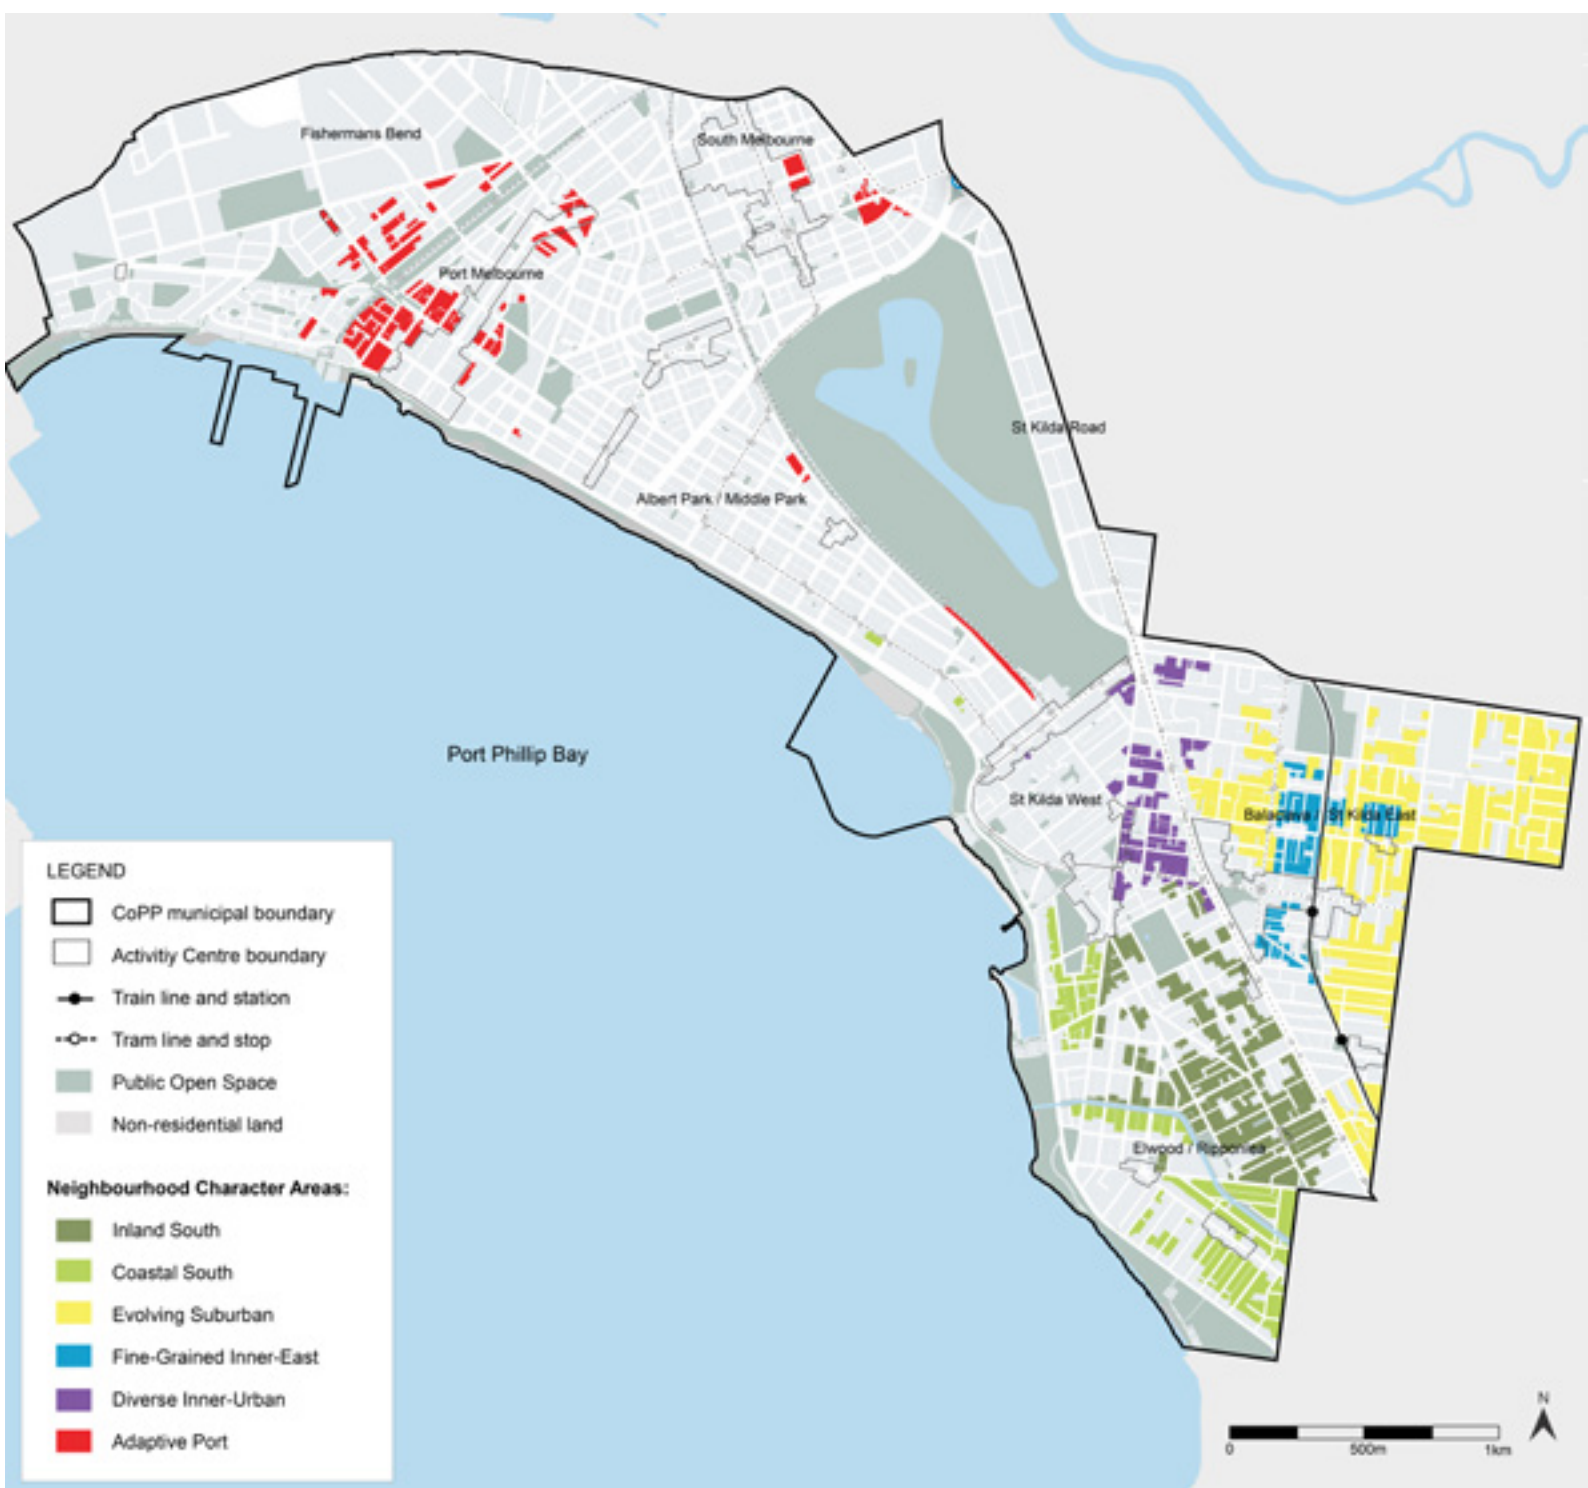

PLEASE NOTE: This factsheet is prepared for the purposes of consultation on the draft City of Port Phillip Housing Strategy. The Statements are subject to changes based on feedback from public consultation and council endorsement.

This factsheet outlines the preferred future neighbourhood character statements (statements) for six character areas. The statements are developed, based on desktop analysis, street survey, and importantly community input to guide future development.

The statements aim to reflect the valued features and characteristics of an area but also be 'forward-looking' to ensure contemporary housing needs are being met.

Map 1 on page 2 indicates at a high level where the statement applies. You can also look up your property or any place of interest and find out if it falls within an identified character area by using the map on this [page](#).

Draft Neighbourhood Character Statements

INLAND SOUTH

Elwood and southern St Kilda form a green and leafy character area that is driven by high-quality landscaping, low and visually permeable fence lines, as well as mature street trees and vegetated verges within the public realm.

The lush nature of the area is enhanced by mature canopy trees within private lots and generous gardens with a variety of shrubs, grasses and groundcovers, which tie into surrounding natural elements such as the Elsternwick Creek and Yalukit Willam Nature Reserve, St Kilda Botanical Gardens and the coastline.

Development in the area will be a mix of architectural styles and typologies, including single dwellings, townhouses, and apartments. The variation in styles and typologies will be united by a careful material palette to help create cohesive streetscapes. The dark red bricks and terracotta tiles of Californian bungalows, timber detailing of Victorian cottages, cream brick of post-war apartment blocks and rendered stairways and arches of Spanish Mission and Art Deco apartments are all valued existing elements that will inspire contemporary responses in highly sustainable built form outcomes.

Car access will be prioritised from rear laneways wherever possible, and where access is off a primary street, vehicle storage will be positioned behind the building line to minimise visual impact and accentuate the visibility of landscaping. Landscaping buffers between constructed driveways and side boundaries will minimise the visual impact of parallel driveways and protect the desirable spacious and green nature of the neighbourhood.

COASTAL SOUTH

Coastal Elwood & St Kilda are highly landscaped with unique references to the coastal proximity through durable and light material palette and native coastal plant species. High-quality landscaping, low fence lines and vegetated verges within the public realm will enhance the sun-kissed and airy character of the area.

Development in the area will be a mix of architectural styles and typologies, including single dwellings, townhouses, and apartments. Mature, valued vegetation will be protected and retained where possible, and a landscape character reflective of the local context will incorporate indigenous coastal plants, supporting a connection to and sense of place. Low-lying coastal scrub vegetation will encourage visual permeability throughout the neighbourhood and give a powerful visual identity to the area, tying it to its valued coastline.

Along with landscaping character, the architecture of the neighbourhood will subtly reference connection to the coast through a robust, natural, light, and textural material palette. Low fences and landscaped front, rear and side boundaries will support public and private interaction, creating safe and comfortable streets.

Dwelling facades will consider the threat of flood damage and finished ground floor levels will be raised to reduce the impact of potential inundation in the future. Secondary frontages along waterways and/or oriented towards the coast will feature windows and balconies to reinforce important views and connection to streets and waterways. Landscape on walls and rooftops will be encouraged, supporting a strong and connected landscape integrated into the built form.

EVOLVING SUBURBAN

An eclectic area with a community focus, built form varies from smaller single dwellings to townhouses and apartments supporting a self-sufficient inner-suburban neighbourhood that thrives with local activity and dwelling diversity.

Architectural style and materiality is diverse but consistent in its delivery of robust and high-quality outcomes that build upon the existing flat front facades, orthogonal building massing, and common use of brick. Large, deep lots with medium side and front setbacks will ensure a coarse-grained spacious and calm feel as the area develops.

Upper levels of buildings are designed to provide diversity in the skyline, avoiding a monotonous, single-height roofline, providing both visual interest and allowing for air and natural light to penetrate through the streetscape.

Safe and engaging streets are created through the delivery of human-scaled and diverse dwellings oriented towards the street with visible entrances, articulated front facades and interaction with the street from verandahs, balconies, and other habitable spaces.

Enhanced landscaping and canopy coverage in the private and public realms creates green streetscapes and reduces urban heat. Canopy trees dominate the streetscape and valued mature vegetation is prominent. Vehicle cross-overs are minimised and where possible provided from rear laneways, promoting safe pedestrian pathways. Low and permeable front fences, that may incorporate planting, enhance the green image of this inner-suburban neighbourhood.

FINE-GRAINED INNER-EAST

This low-lying, tightly packed pocket is an intimate, human-scaled character area. Fine-grained streets of narrow lots with attached single-storey weatherboard workers cottages inform a feeling of enclosure that is reinforced by narrower streets, small building setbacks, thin footpaths, street verges and smaller public landscaping. The large cobblestone gutters further reduce the visible street width and give this area a 'back-street' laneway feeling that enhances its quiet and approachable character.

Future development will allow light and visual access to the street, permitting with verandahs and front porch social spaces encouraging interaction between dwellings & creating a welcoming, safe neighbourhood with evident passive surveillance.

Permeable and low front fencing will ensure dwellings engage with the streetscape and encourage interaction between neighbours to further emphasise the human scale of this character area.

This area will have high site coverage due to the narrow, short lot sizes and lack of front or side setbacks. As such, roof gardens, green walls and planting along fence lines will be crucial to provide biodiversity, habitat and connection to nature whilst also reducing the urban heat island of this tightly packed inner-suburb pockets.

DIVERSE INNER – URBAN

With remarkable variation in building form, era and scale, this area offers an inner urban character with the potential for excellent diversity and flexibility in its built form. With a distinctive array of rooflines, façade arrangements, street orientations and material choices, this neighbourhood showcases adaptable, innovative and environmentally sensitive design. The prevalent material palette leans towards modernity, incorporating elements such as steel structures, aluminium framing, timber, exposed concrete, and pockets of brickwork.

Side setbacks are generally small or non-existent, while front setbacks differ creating variation within the character area allowing for flexible new development. With the area's proximity to – and views of – the Melbourne CBD presents a strategic location for future growth in areas identified for moderate and substantial housing growth. The neighbourhood is dynamic and lively, celebrating its artistic and creative heritage through distinctive, adaptable, and forward-looking architecture.

Landscape will be interwoven with the architecture through fence line planter boxes, balcony, rooftop and wall gardens with canopy trees providing essential shade. These planting elements soften the built form of the area and ensure there is a biodiversity connection between the coast, Albert Park Lake, and the leafy inner suburbs further east. Permeable fences improve visual access onto front gardens enhancing the feeling of safety through passive surveillance.

ADAPTIVE PORT

This area will combine high-density, adaptable development with a consistent building mass, profile, and materiality. The built form will feature orthogonal dwellings with flat facades that often extend to the front boundary, creating a noticeable street wall uniformity. Side setbacks will be consistent and small or non-existent, which fosters a cohesive rhythm along the streetscape.

The essence of the neighbourhood's character lies in its industrial heritage combined with modern coastal living. New development will be innovative and flexible, responding to each unique site.

Despite the built form diversity, a commonality will be formed by small to non-existent setbacks, robust street walls, engaging rooflines and a unique semi-industrial material palette. A visual identity is formed by referencing building profile, materiality, scale and rhythm of the area's working class architectural typologies; warehouses, bank houses, cottages, and wrought-iron terraces.

Development will embrace best-practice environmentally sensitive design and incorporate planting into fences and facades. Landscaping on shared and private rooftop gardens will be visible across the roofline.

With high-density living anticipated, addressing challenges such as limited private greenspace, high impermeable surfaces and climate change-induced weather extremes is crucial and may require interventions in the public realm. Flood risk will also be factored into the construction and materiality of building facades, and raised finished ground floor levels will reduce the risk of damage from inundation. Increased landscaping and Water Sensitive Urban Design (WSUD) initiatives such as rain gardens, particularly featuring native coastal vegetation, will be an important part of achieving this neighbourhood's resilient future character and visual identity.
